This office action is responsive to communications filed 04/20/2004.

Claims 1 – 3 are pending.

1. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

2. Claim 2 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claim 2 recites the limitation “said pressure sensors being attached to the upstream side and the downstream side of the flow resistance” is unclear in that one of the pressure sensors is a differential pressure sensor that is connected across the flow resistance.

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claims 1 - 3 are rejected under 35 U.S.C. 102(b) as being anticipated by the Admitted Prior Art disclosed in Figure 4.

Pressure sensor (19) is being read as the pressure detecting means on the downstream side of the flow resistance (14). A bomb (1) for fluid supply is also disclosed. The remaining elements recited in the claims are clearly disclosed in Figure 4. The limitation in claim 2 is also met by Fig.4, since it shows a differential pressure sensor (15) in addition to the pressure sensor (19) disposed downstream of the flow

resistance (14). The limitation "for carrying out a predetermined calculation based on signals from the differential pressure detecting means and the pressure detecting means for controlling the opening degree of the control valve based on a result of the calculation" is a functional limitation that the control portion (10) in Fig. 4 is capable of.

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
